

Project Overview

As of April 26, 2013

Rendering of future roadway markings, S. Ohio Avenue south of Mooberry Street.

S. Ohio Avenue / S. Champion Avenue Bike Lanes — Mooberry St. to Frebis Ave

Description:

- Both Ohio and Champion Avenues were resurfaced in the Fall of 2012, from Mooberry Street to Frebis Avenue.
- With this resurfacing, the City is adding on-road bicycle facilities and new roadway markings in accordance with the City's Bicentennial Bikeways Plan to make streets safer for bicyclists and motorists.
- Bicycle lanes will be added on S. Ohio Avenue from Mooberry to Frebis, and on S. Champion Avenue from Livingston to Frebis.
- Shared-use (bike and motorist) lane markings will be placed on S. Champion Avenue between Livingston Avenue and Mooberry Street.
- This project will not result in any loss in on-street parking spaces.

Benefits:

- Marked on-road bicycle facilities will better serve the increasing number of people riding bicycles to reach schools, jobs and other destinations.
- Clearly defined bike lanes will improve the safety of bicyclists using these facilities on S. Ohio and S. Champion avenues.
- These improvements are consistent with the Bicentennial Bikeways Plan, aiming to improve biking safety and connectivity throughout Columbus.

Schedule: Pavement to be marked and signs posted in May, 2013.

PUBLIC SERVICE

Future Markings: Shared lane markings (left), or "Sharrows," remind motorists that bicyclists are sharing the lane, and provide guidance to where bicyclists should ride within the traffic lane. Bike lanes (right) are a separate lane restricted for use by only bicyclists, and are defined from the traffic lane by a solid or dotted stripe, and signage and markings.
